FIRST NATIONAL SEMINAR ON

VETERINARY MEDICINE AND ANIMAL HEALTH

Days Chairwomen :
Dr. OUCHERIAH Yasmine

Honorary chairman :
Pr. DIF Abdesslam

EVENT SUMMARY

Veterinary medicine is rapidly evolving through advances in diagnostic techniques, therapeutic approaches, and artificial intelligence (AI).

However, veterinary education remains largely theory-based, with limited practical training and insufficient exposure to modern technologies, creating a gap between academic and professional practice.

This seminar aims to bridge this gap by providing veterinary students and professionals with practical training, expert insights, and an introduction to innovative technologies, including AI applications in veterinary medicine. Through scientific presentations and practical demonstrations, participants will strengthen their clinical skills and gain a better understanding of current and future veterinary practices.

The event promotes innovation, professional development, and excellence in veterinary education, preparing future veterinarians to meet the challenges of a rapidly evolving profession.
